

Ease of use

PROTECT Basic.GE

Effective surge protection for sensitive home electronics

These power strips with surge protection guard against harmful power surges in the home. Nearby lightning strikes, for instance, can cause mains voltages to surge, damaging connected equipment. Even switching on other home electricals – like fluorescent lights with conventional ballasts – can trigger an overvoltage in a home's entire mains system. The AEG PROTECT Basic.GE series of surge protectors offers an effective safeguard against these kinds of voltage spikes.

The surge protectors have five outlets for standard grounded power plugs, plus one or two wider-spaced outlets designed to accommodate larger power adapters. The surge protectors include filters to suppress high-frequency interference voltages. To prevent tangled cables, they are also fitted with a cord management bracket at one end. Two LEDs indicate whether the power is on and surge protection is active. The power switch enables the mains supply to connected equipment to be cut off.

Key features:

- Five grounded outlets plus one or two adapter-spaced outlets
- Power cord (1.8m) with angled plug
- Resettable automatic circuit breaker
- All outlets are fitted with child locks
- Prepared for wall-mounting
- LEDs indicating operating state and active surge protection

PROTECT Basic.GE: Technical data

Category III / D / T3 acc. to IEC 61643-1	PROTECT Basic.GE 6	PROTECT Basic.GE 7
Input voltage	230 Vac, 50/60 Hz	
Input connector	angled grounded plug	
Output connections (type F)	5 x grounded outlets 1 x adapter-spaced outlets	5 x grounded outlets 2 x adapter-spaced outlets
Safety standard	KEMA-KEUR, KEMA GS	
Protection system	triple arrester, L-N / L-PE / N-PE	
Dimensions ca. (W x H x D)	404mm x 42 mm x 60 mm	288mm x 42mm x 110mm
Weight approx.	0,6 kg	0,7 kg
AEG part number	600 000 7194	600 000 7196
